Model Specifications

- **Dimensions:** 1.25"H x 2.7" W x 3.9" L
- **Weight:** 5.5 ozs.
- **Laser Frequencies:** 905±50 nanometers (nm)
- **Radar Frequencies (1520/1525/1530):** 10.500 - 10.550 GHz (X band)
24.050 - 24.250 GHz (K band)
33.400 - 36.000 GHz (Superwideband Ka)
- **Radar Frequencies (1505/1510/1515):** 10.500 - 10.550 GHz (X band)
24.050 -24.250 GHz (K band)
33.340 - 33.880 GHz (Ka)
34.110 - 34.560 GHz (Ka)
34.770 - 35.220 GHz (Ka)
35.450 - 35.900 GHz (Ka)
- **Operating Temperature Range:** -20°C to +80°C (-4°F to +176°F)
- **Power Requirements:** Operational 12 to 15 volts DC, 200 mA nominal

Specifications are subject to change
without notice.

INTRODUCTION	MODEL FEATURES	MODEL FEATURES	LED DISPLAYS	OPERATION	OPERATION
<div>1</div> <p>Dear Whistler Owner,</p> <p>Congratulations on your purchase of a Whis- tler radar•laser detector.</p> <p>Reflecting our continued commitment of pro- viding innovative detection products, your Whistler detector integrates radar and laser detection in a high quality design. In addition to providing complete coverage of all radar and laser speed monitoring guns, your Whis- tler includes many preferred features. It also detects the new Safety Warning System™. This provides advanced warning of various high- way hazards, enabling you to respond more appropriately to potentially dangerous condi- tions. The Whistler 1520/1525/1530 also of- fers the benefit of nondetectability by alerting you to the presence of the VG-2 (a “radar de- tector detector”).</p> <p>To fully acquaint yourself with the operation of your unit and to better understand the differences be- tween detecting radar and laser signals, we re- commend reading this entire manual.</p> <p>Enjoy your Whistler detector and please drive safely.</p> <p>Sincerely,</p> <p>WHISTLER CORPORATION</p>	<div>2</div> <p>Whistler's ergonomic and user-friendly design provides a new level of operating convenience. Special features include:</p>  <p>LED Display</p> <ol style="list-style-type: none">1. Rear Laser Antenna (1520/1525/1530) - An integrated optical waveguide provides su- perior detection of laser signals transmit- ted from behind.2. Bracket Release Button - Provides quick and easy release of the mounting bracket.3. Power/Volume Control (PWR/VOL) - A single control turns the unit on/off and ad- justs audio level.4. QUIET Button - Pressing QUIET before a signal is detected replaces the continuous audio alert with an auto-mute audio pat- tern (1520/1525/1530 only). Pressing QUIET during a radar/laser encounter si- lences audio alerts, while allowing visual alerts to keep you informed.5. VG-2 Button (1520/1525/1530 only) - Engages or disengages VG-2 Cloaking Technology™ for nondetectability.	<div>3</div> <ol style="list-style-type: none">6. CITY Button - Reduces the annoyance of false alerts typically encountered in urban driving areas.7. Speaker - Provides distinct audio warn- ings for X, K, Ka band, instant-on (pulse) radar, safety radar and laser.8. Power Jack - Provides connection for the power cord.9. Radar Antenna - Compact, high-effi- ciency antenna receives radar signals.10. Laser Antenna - Provides long range la- ser detection. Both antennas must have an unobstructed view of the road.11. Mounting Bracket Location - Slot holds mounting bracket firmly.  <p>Accessories included are highly functional and easy to use. Power Cord - Connects to the unit's power jack and your vehicle's lighter socket. Visor Bracket - For installing the unit on your vehicle's sun visor. Velcro® Fasteners - Designed to secure the unit on a level dashboard.</p>	<div>4</div>  <p>Model 1520/1525/1530</p>  <p>Model 1505/1510/1515</p>	<div>5</div> <p>Power On And Self-Test - Each time your Whistler detector is turned on, an automatic self-test sequence confirms that the speaker and visual displays are functional. During Power Up, all the LEDs illuminate, while the X, K, and Ka alerts are sounded in se- quence. Immediately after the radar alerts, the red LEDs are momentarily cancelled, then il- luminare from right to left while the laser alert is sounded. After the laser alert the 1st and 4th (3rd on 1505/ 1510/1515) alert LEDs flash and the Safety Ra- dar alert is sounded. At the end of the self-test sequence the unit is in highway mode.</p> <p>Feature Engaged Confirmation Your Whistler detector provides audible confirmation each time a feature is engaged or canceled. When a button is pressed, one beep confirms feature “on”, two beeps con- firm feature “off”. With Feature Engaged Confirmation, you receive immediate feed- back concerning the status of your unit.</p> <p>Quiet Mode The QUIET Button accesses one of two muting options. 1. Manual Quiet When an audio alert is sounded, you can silence the alarm by pressing QUIET. The only time you can engage Manual Quiet is during an audio alert.</p>	<div>6</div> <ol style="list-style-type: none">2. Pre-set Audio Quiet (1520/1525/1530 only) Pressing QUIET before a radar signal is detected provides an alternate alert pattern, consisting of four beeps (indicating X, K, Ka or Safety radar) fol- lowed by clicking. The clicking will continue for as long as the detected signal is present or any new signal is detected within 20 seconds, becoming more rapid as the strength of the signal increases. If Pre-set Audio Quiet is engaged, pressing QUIET while the unit is alarming will cancel the beeps or clicking. Pressing QUIET a second time when the unit is not alarming will cancel Pre-set Audio Quiet mode and restore the continuous audio alert pattern. <p>City Mode Automatic door openers, intrusion alarms, and other devices which share frequen- cies with police radar can be the source of mis- leading alerts, especially in urban and suburban areas. Driving in City mode will reduce these un- wanted audio alerts while keeping you quietly in- formed of signal activity with visual alerts. Pressing the CITY Button engages City mode. Pressing the CITY Button a second time cancels City mode. In City mode, the unit responds to X, K, Ka, or Safety radar signals by alerting you with an initial alarm (2 beeps), and then remains quiet unless the strength of the detected signal becomes very strong. Two additional beeps are provided when a weak signal becomes strong.</p>
RADAR ALERTS	RADAR LASER ALERTS	RADAR LASER ALERTS	RADAR • LASER ALERTS	VG-2 ALERTS	INSTALLATION
<div>7</div> <p>Highway Mode Highway mode provides full au- dio warnings any time radar (X, K, Ka, Safety) or laser signals are detected, and is recommended for open road driving. Highway mode is automati- cally engaged after the unit is turned on and com- pletes the self-test.</p> <p>VG-2 Detection Mode (1520/1525/1530 only) The VG-2, also known as a “radar detector de- tector,” is a special receiver used by police to detect signals radiated by a radar detector. Because of your Whistler detector's superior sensitivity and low radiated signal level, you will be able to detect the VG-2 before the VG- 2 is able to detect you. Press the VG-2 button once to engage, and the VG-2 LED illuminates. Pressing a second time can- cels VG-2 detection mode and the VG-2 LED is extinguished.</p> <p>Radar Audio And Visual Alerts When your Whis- tler detector encounters traffic radar, it provides a distinctive audio tone for the specific radar band detected: X, K, or Ka. At the same time, LEDs il- luminare sequentially from left to right. The green and amber LEDs are cancelled during an alert. The audio alerts are continuous, but have a Gei- ger counter-like pattern to help you determine your distance from the radar source; the faster the beep- ing, the closer you are to the transmitting source.</p>	<div>8</div> <p>At the same time, illumination of multiple LEDs indicates relative signal strength.</p> <p>Radar Band Identification (1520/1525/1530) When the Whistler 1520/1525/1530 encounters traffic radar, the Radar Band Indicators confirm the band detected by illuminating one or both of the LEDs as follows:</p> <p>X Band — Amber LED Only K Band — Red LED Only Ka Band — Amber And Red LEDs Illuminate</p> <p>Pulse Protection® Pulse (or instant-on) radar is more difficult to detect than conventional radar because it remains “off” until activated to mea- sure the speed of a targeted vehicle. When a pulse type transmission is detected, your Whistler detector sounds an urgent 3-sec- ond audio warning and flashes the red LEDs at their fastest rate. After the 3-second pulse alert, the standard alert pattern continues for as long as the signal is present. It is important to respond promptly to a pulse alert, since warning time may be minimal.</p> <p>Safety Radar Audio/Visual Alerts Your Whistler detector detects the new Safety Warning System™. This provides advanced warning of various road hazards including acci- dent sites, highway construction, emergency</p>	<div>9</div> <p>vehicles, etc. and enables you to respond more appropriately to potentially dangerous con- ditions. When your Whistler detector detects a safety radar signal, it provides a distinctive au- dio tone and illuminates the first LED and the last LED in the signal strength display.</p> <p>Model 1520/1525/1530</p>  <p>The first and last LED in the Signal Strength display flash to indicate detection of a Safety radar signal.</p> <p>Model 1505/1510/1515</p>  <p>The first and last LED in the Signal Strength display flash to indicate detection of a Safety radar signal.</p>	<div>10</div> <p>The Safety radar alert is displayed for as long as the signal is present and the audio alert is continuous, but has a Geiger counter like pat- tern to help you determine your distance from the Safety radar source; the faster the beeping, the closer you are to the source.</p> <p>Laser Audio And Visual Alerts If you are the targeted vehicle, a laser gun can often determine your speed within a few sec- onds after you receive an alert. In this situa- tion there is generally no time to safely adjust your speed. However, if you are traveling near or behind the targeted vehicle and receive an alert, re- sponse time should be sufficient. Any laser alert, regardless of duration, requires imme- diate action! When your Whistler detects a la- ser signal, the laser audio alert is sounded and the four red LEDs (three red LEDs on 1505/ 1510/1515) illuminate from right to left for as long as the signal is present, or for a minimum of three seconds. When the laser signal is no longer detected, the audio warning ends, but the LEDs con- tinue to flash slowly for three seconds, indi- cating a laser encounter has just occurred.</p>	<div>11</div> <p>VG-2 Audio Visual Alert (1520/1525/1530) When a VG-2 signal is detected the VG-2 LED flashes rapidly for 3 seconds and the VG-2 alert is sounded. After the 3 seconds the audio is canceled and the VG-2 alert LED flashes at a slower rate. This cycle is repeated if the VG-2 signal is again detected. During the period a VG-2 signal is detected, a radar signal cannot be detected. However, be- cause the VG-2 alert has confirmed that a pa- trol car is nearby, you are already aware of the potential for speed monitoring and can ad- just your speed accordingly. Laser detection is not affected while a VG-2 signal is detected.</p>	<div>12</div> <p>Mounting Guidelines For effective detection of radar and laser sig- nals, it is important to mount your unit prop- erly. Performance will be best if you position the detector with a level, through-the-wind- shield view of the road ahead. (Remember, your unit's “eyes” are at the end opposite from the LED's and controls.) Here are some additional points to keep in mind.</p> <ul style="list-style-type: none">• Do not mount your detector behind wipers, ornaments, mirrored sunscreens, etc. These obstructions have metal surfaces which can block radar and laser signals and reduce critical warning time. (Regular tinted glass does not affect reception.)• Some newer windshields have an Instaclear™ or Electricear™ type coating, which block radar and laser signals. Consult your dealer or the owner's manual supplied with your vehicle to determine if your windshield has this coating.• Avoid placing the unit in direct contact with the windshield.• To reduce the possibility of theft, conceal your unit when not in use.

<p>Dash Mounting</p> <p>Make sure the mounting location you have chosen is clean and dry. Clean with isopropyl alcohol if necessary to remove any waxes or polishes.</p> <p>Separate the Velcro® fastener strips. Peel the backing off each strip, adhere one piece to the dash and the other piece to the bottom of the unit, taking care not to cover the serial number.</p>  <p>Be careful not to place the Velcro over the unit's serial number. If the Velcro is removed, the serial number may be pulled off the unit. Units without serial numbers are not covered under warranty.</p> <p>When joined, the two strips provide a secure mount, yet the unit can be easily removed for safekeeping when not in use. Once mounted, your unit is ready to be connected to the power cord.</p> <p>Visor Mounting</p> <p>Place the bracket into the bracket mounting slot of the detector. To install your detector on the visor, slide bracket clip over the rear edge of the visor as shown in the illustration.</p>		 <p>When visor mounting, make sure your unit is relatively level and has a clear view of the road ahead.</p> <p>Power Connection</p> <p>Plug the small end of the power cord into the unit's power jack, then plug the large end of the cord into your vehicle's lighter socket. Make sure the plug fits snugly, and be sure to keep the socket and contacts free of ashes and dirt.</p> <p>Windshield Mounting (optional accessory)</p> <p>With the windshield mounting kit your Whistler detector can be mounted to your vehicle's windshield. Although not included it is available through many Whistler retailers or can be ordered directly from Whistler. (See pg.26 for available accessories and pricing.) First, install the two suction cups and rubber bumper onto the bracket by fitting them into their holes. Now, press the suction cups onto the windshield glass at the location you have chosen. Slide the detector onto the bracket until it locks into place. If necessary, you may adjust the bracket to the proper angle by bending it. To remove the bracket, pull the tab on each suction cup.</p>		 <p>To make the unit level, you can easily adjust the angle of the windshield bracket by bending it.</p> <p>Fuse Replacement</p> <p>The lighter socket plug is equipped with a replaceable 2 amp 3AG fuse located behind the silver tip. To replace the fuse, carefully unscrew the tip of the plug. (Important note: Unscrew slowly. The tip contains a spring which may fly out when disassembling.) Insert the new fuse with spring and screw the tip on. With use, screwcap on plug may loosen. Retighten occasionally.</p>  <p>Unscrew the tip of the lighter socket plug carefully when replacing the 2 amp fuse.</p>		<table><tr><th>Problem</th><th>Action</th></tr><tr><td>No display or audio.</td><td><ul style="list-style-type: none">• Check fuse in Whistler plug; replace if necessary.• Check fuse for lighter socket; replace if necessary.• Make sure lighter socket is clean and fully operational.</td></tr><tr><td>Unit alarms when vehicle hits bumps.</td><td><ul style="list-style-type: none">• Check for loose lighter socket; tighten and clean socket.• Check connections at both ends of power cord. Substitute another cord to determine if cord is defective. Return defective cord to factory.</td></tr></table> <p>Your Whistler detector is expertly engineered and designed to exacting quality standards to provide you with reliable, trouble-free operation. If difficulties occur which cannot be solved by information provided in this Troubleshooting Guide, please call Whistler Customer Technical Service at 1-800-531-0004 before returning your unit for service.</p>		Problem	Action	No display or audio.	<ul style="list-style-type: none">• Check fuse in Whistler plug; replace if necessary.• Check fuse for lighter socket; replace if necessary.• Make sure lighter socket is clean and fully operational. (see pg. 6).• Check PWR/VOL control setting.</td></tr></table> <p>Laser Facts</p> <p>It's well documented that many radar guns cannot reliably provide the speed of a targeted vehicle that is traveling in a group of vehicles. In contrast, a laser gun can target a specific vehicle out of a line of traffic and determine its speed.</p> <p>The advantage of laser over radar in terms of target identification is the result of the laser gun's narrow beam. A radar transmission can cover more than a four-lane highway at a distance of 1,000 feet, compared with a laser transmission which covers about 6 feet at the same distance. This is one reason why laser is more difficult to detect than radar.</p>		Problem	Action	Unit alarms when using vehicle equipment or electrical accessories (brakes, power mirrors/windows, directionals, horn, etc.).	<ul style="list-style-type: none">• Check vehicle's electrical system, including battery and alternator.• Install a filter capacitor (470µfd. 25 volt or larger capacitance value) on the back of the lighter socket. SPEED MONITORING TECHNOLOGIES		ARE DETECTORS LEGAL?		WARRANTY INFORMATION		WARRANTY INFORMATION																		
20		21		22		23																		
<p>Radar Detector Detectors</p> <p>The Interceptor VG-2, or simply VG-2, is a microwave receiver used by police to detect signals radiated by the local oscillator of a radar detector. Because its purpose is to identify persons driving with radar detectors, the VG-2 is known as a "radar detector detector". The VG-2 is the primary tool used by the police to identify radar detector equipped vehicles. If caught, drivers risk losing their radar detector and receiving a fine. In addition, instant-on radar is almost always used in combination with the VG-2, leaving unsuspecting motorists vulnerable to receiving two tickets - one potentially for speeding, the other for possession of a detector. Having a radar detector capable of detecting the VG-2 alerts you to the presence of a speed trap and preserves your radar detector investment.</p>		<p>Are Detectors Legal?</p> <p>Laser detectors are completely legal in every state when used in automobiles or light trucks (under 10,000 lbs.). Similarly, when used in automobiles or light trucks, radar detectors are legal in almost every state. Exceptions are Virginia and Washington D.C., which have local regulations restricting the use of radar receivers in any vehicle.</p> <p>Concerning trucks over 10,000 lbs., the Federal Highway Administration (FHWA) issued a regulation, effective January, 1994 which prohibits radar and laser detector use in these types of vehicles nationally.</p> <p>Because of legal and legislative efforts underway to repeal the regulation, and because enforcement varies from state to state, we recommend contacting the Radio Association Defending Airwave Rights (R.A.D.A.R.) for the most current information concerning the status and enforcement of the FHWA regulation in areas where you travel. RADAR can be reached at:</p> <p>Telephone: (513) 667-5472</p> <p>Fax: (513) 667-3178</p> <p>Prior to the FHWA regulation, laws existed in the state of New York restricting the use of radar detectors in trucks over 18,000 lbs. and in Illinois in trucks over 26,000 lbs.</p>		<p>Consumer Warranty</p> <p>Your Whistler detector is warranted to the original purchaser for a period of one year from the date of original purchase against all defects in materials and workmanship. This limited warranty is void if the unit is abused, modified, installed improperly, if the housing has been removed, or if the serial number is missing. There are no express warranties covering this product other than those set forth in this warranty. All express or implied warranties for this product are limited to one year. Whistler is not liable for damages of any type arising from the use, misuse, or operation of this product.</p> <p>Service Under Warranty</p> <p>During the warranty period, defective units will be repaired or replaced (with the same or a comparable model), at Whistler's option, without charge to the purchaser when returned prepaid, with dated proof of purchase to the address on pg. 23. Units returned without dated proof of purchase will be handled as described in the section "Service Out Of Warranty." Due to the specialized equipment necessary for testing a radar/laser receiver, there are no authorized service stations for Whistler brand detectors other than the factory.</p>		<p>When returning a unit for service under warranty, please follow these instructions:</p> <ol style="list-style-type: none">1. Ship the unit in original carton or in a suitable sturdy equivalent, fully insured, with return receipt requested, and shipping charges prepaid to: <p style="text-align: center;">Whistler CTS 16 Elizabeth Drive Chelmsford, MA 01824</p> <p>IMPORTANT: Whistler will not assume responsibility for loss or damage incurred in shipping. Therefore, please ship your unit insured with return receipt requested.</p> <ol style="list-style-type: none">2. Include with your unit the following information, clearly printed: Your name and street address (for shipping via UPS), and a daytime telephone number. (No P.O. Box please.) A detailed description of the problem (e.g., "Unit performs self-test but does not respond to radar"). A copy of your dated proof of purchase or bill of sale.3. Be certain your unit is returned with its serial number. For reference, we recommend keeping a record of your unit's serial number. Units without serial numbers are not covered under warranty.		<p>IMPORTANT: To validate that your unit is within the warranty period, make sure you keep a copy of your dated proof of purchase.</p> <p>Service Out Of Warranty</p> <p>Units will be repaired at "out of warranty" service rates when:</p> <ul style="list-style-type: none">• The unit's original warranty has expired.• Dated proof of purchase is not supplied.• The unit has been returned without its serial number.• The unit has been abused, modified, installed improperly, or had its housing removed. <p>The minimum out of warranty service fee for your Whistler detector is \$45.00 (U.S.). If you require out of warranty service, please return your unit as outlined in the section "Service Under Warranty" along with a certified check or money order for \$45.00. (Payment may also be made by MasterCard or Visa; personal checks are not accepted.) In the event repairs cannot be covered by the minimum \$45.00 service fee, you will be contacted by a Whistler technical service specialist who will outline options available to you. If you elect not to have your unit repaired/replaced, it will be returned to you and your money refunded.</p> <p>IMPORTANT: When returning your unit for service, be certain to include a daytime telephone number.</p>																
SPEED MONITORING TECHNOLOGIES		ACCESSORIES																						
19		26																						
<p>For best protection keep these additional suggestions in mind:</p> <ul style="list-style-type: none">• Because your vehicle's license plate or headlights are the laser gun's primary targets, mounting your Whistler detector on the dash can improve laser detection at short range.• Do not follow closely behind any vehicle you cannot see through. If you can't see past a vehicle ahead of you, chances are your detector won't either.• The receiving range of your laser detector will not be the same as a radar detector. Laser guns are most often used at short range. <p>Other Speed Detection Systems</p> <p>Several techniques other than radar or laser are used to measure vehicle speeds. When these methods are being used, no detector can provide a warning. These techniques include:</p> <ul style="list-style-type: none">• Pacing - A patrol car drives behind you and matches your driving speed.• Vascar/Aircraft - The time it takes a vehicle to travel a known distance is measured.		<table><tr><th>Order Code</th><th>Description</th><th>Price</th></tr><tr><td>202138</td><td>Visor Bracket</td><td>\$6.95</td></tr><tr><td>202139</td><td>Windshield Bracket</td><td>\$9.95</td></tr><tr><td>206552</td><td>Straight Power Cord (5')</td><td>\$14.95</td></tr><tr><td>206553</td><td>Coiled Power Cord (7')</td><td>\$15.95</td></tr><tr><td>206879</td><td>Velcro</td><td>\$ 1.95</td></tr><tr><td>206880</td><td>Hardwire Kit (10')</td><td>\$ 9.95</td></tr></table> <p>Shipping and Handling (Per Order) \$ 3.00</p> <p>Massachusetts residents please add applicable sales tax.
